Location:
Estado de México, México.

Profile

My passion for learning led me to train as a junior frontend developer in a self-taught way. I'm a faithful believer in multidisciplinary thinking as a booster of the art created by the human being.

Educational formation

FreeCode Camp, Udemy

JavaScript and ReactJS course.

- I was interested in JavaScript because of its ability to dynamize projects and its creativity. In addition to support me with one of the most required libraries currently as ReactJS.

Udemy

HTML5 and CSS3 course.

- On this platform I learned about HTML and style sheets for the structure and style of web pages.

English

Intermediate-high level.

- I studied English at different institutions where I learned to communicate at a conversational level.

Work experience

Own projects

I did some projects of my own to improve my skills, which you can see in my portfolio in the contact me section.

- I learned how to structure projects with HTML5.
- I studied the style and form of my work with CSS3, as well as layout with grid and flexbox.
- I learned how to create sites that adapt to the user's device.
- It was necessary to train me in the use of version control software such as Git.
- I mastered a programming language like JavaScript to give dynamism to my projects together with the Facebook library: ReactJS.

Skills

Technologies I learned:
Git, HTML5, CSS3, Sass, Less Bootstrap, JavaScript, ReactJS, Redux.

Interested in learning:
Angular and TypeScript.
